Sustainable transport measures

Cycle storage

Actions:

- i. Provide cycle storage spaces for building users

Compliant spaces

- A **minimum of four spaces** must be provided. The **total** number of spaces will be **determined by a calculation** which takes the building type and size specific to the project into account – your BREEAM AP or Assessor will calculate this.
- Cycles can be **secured** within spaces in racks with overhead covering. The cycle racks are set in or fixed to a permanent structure (building or hardstanding) or alternatively, may be located in a locked structure fixed to, or part of, a permanent structure with appropriate surveillance
- **The distance** between each cycle rack, and the cycle racks and other obstructions, e.g. a wall, allows appropriate access to the cycle storage space for easy storage and access to bikes
- The storage facility or entrance to the facility is in a prominent site location **visible** to potential users from either an occupied building or a main access to a building
- The cycle storage facility has **adequate lighting**; demonstrated by meeting the lighting criteria in BREEAM issue Hea 01 Visual comfort
- The lighting must be **controlled** to avoid out-of-hours use and operation during daylight hours, where there is sufficient daylight in or around the facility.

Note: This document is intended as guidance only. Consult your BREEAM AP or Assessor to ensure compliance is achieved.
